On-Board Solutions

Level up your fleet's efficiency and sustainability with Consat Telematics' On-Board Solutions. Our reliable and user-friendly products come equipped with mobile connectivity and real-time information to boost your fleet's performance. We also support integration of 3rd party systems through our vehicle integration platform to support your operations with one integrated solution.

Energy efficiency for cost savings and longer equipment lifespan.

Flexible data transfer and analysis through seamless hardware integration.

Consistent performance and lower maintenance costs from stable hardware and software.

Simple installation and maintenance with seamless hardware integration.

Real-time data connectivity for improved operations and efficiency.

Seamless Integration and Total Control – Wide Variety of Supported On-Board Solutions

The Consat Vehicle Integration Platform supports integration of a wide range of on-board equipment, including destination displays, passenger information displays, switches, CCTV, voice systems, APC, heads-up displays, ticketing systems, ADAS, alcolock devices, partition (touch) displays, and more. By having all on-board equipment integrated through the Consat system, you have ultimate control of your on-board systems. The real-time notifications provided regarding disconnected devices are highly valued by maintenance departments, enabling them to promptly address any issues and keep the on-board systems' up-time high.

Multiple Hardware Interfaces – Simplify Your Tech Setup

Our Consat vehicle computer is equipped with all the ports needed for the great majority of applications, and supports multiple hardware interfaces and data types. This provides flexible data transfer and analysis through seamless integration with sensors and equipment.

Stable Hardware and Software Platforms – Dependable Technology

Consat Telematics' On-Board Solutions offer stable hardware and software platforms for consistent performance, reduced downtime, and lower maintenance costs. Real-time data is sent to the control centre and back office, with remote software updates available.

Rugged and Easily Installed and Serviced Units – Seamless and Reliable Performance

Our Consat vehicle computer is a compact but rugged unit that is easily installed and serviced. Equipped with all the ports needed for the majority of applications, the installation is much simplified compared to separate units. It also has an integrated 3G/4G modem for both data and voice, making it a versatile option.

Versatile Display Options – Customised and Dynamic Experiences

Our range of display options includes the Driver Touch Display, the Interior TFT Display, and the On-Board Infotainment Screen. Each display is built with toughened safety glass and automatic brightness with a built-in light sensor. With hardware buttons for adjusting brightness, optimal visibility is ensured in varying lighting conditions.
