# Traffic Management
– Modernised Traffic Management

**Our traffic management system is a flexible multi-purpose solution for traffic planners, traffic operation agents, and fleet operation managers that streamline operations with centralised traffic monitoring and reporting, providing real-time passenger and driver information.**

Flexibility to choose between automatic or manual vehicle assignment.

Duty-based traffic management.

Reinforcement of assignments to avoid disruptions to services.

Real-time assignment status information for quick problem identification.

Valuable assignment reports to improve operational efficiency and plan-adherence.

### Flexible Assignment Options – Empower Your Workforce and Optimise Productivity

Our Traffic Management solution offers both automatic and manual vehicle assignment options. The automatic option allows you to centrally assign vehicles using the Traffic Studio application, without driver input, while the manual option allows drivers to assign themselves to blocks and duties. This flexibility means you can choose the best approach for your specific needs and business requirements.

### Valuable Insights and Reports – Uncover Opportunities for Improvement and Growth

With Consat Telematics, you have access to real-time assignment status information, which is displayed prominently both in the vehicles and in the Traffic Studio application. The Traffic Management solution also provides two assignment reports that offer valuable insights into your fleet management operations, helping you improve operational efficiency and timetable-adherence.

### Efficient Traffic Management – Streamline Operations and Enhance Safety
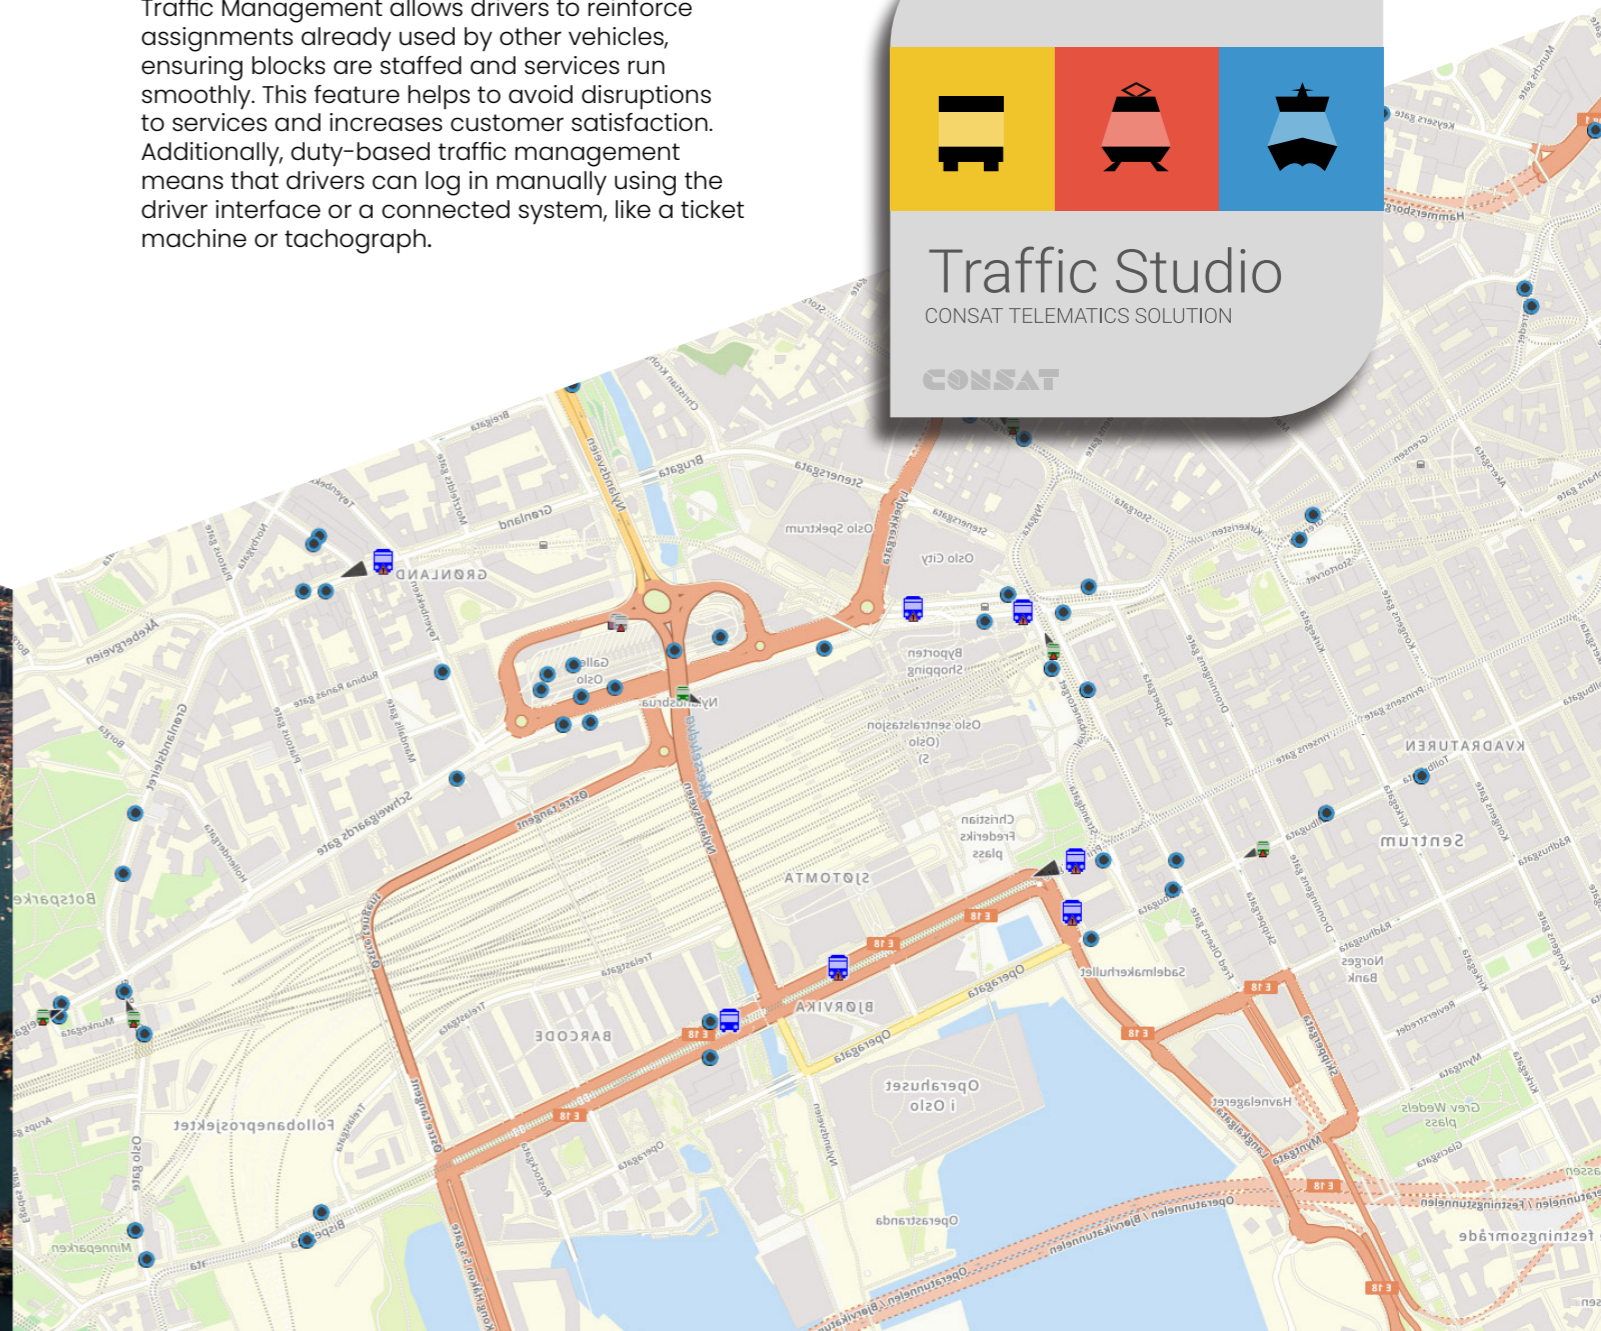

Traffic Management allows drivers to reinforce assignments already used by other vehicles, ensuring blocks are staffed and services run smoothly. This feature helps to avoid disruptions to services and increases customer satisfaction. Additionally, duty-based traffic management means that drivers can log in manually using the driver interface or a connected system, like a ticket machine or tachograph.

### Detailed Traffic Analysis – Make Informed Decisions

The Traffic Log report provides a simple summary of traffic deviations and is a powerful tool for measuring operator performance, monitoring deviations, and reporting causes and notes. It can also be used as a starting point for a more detailed analysis of issues indicated in the report.

### Road Condition Monitoring – Enhance Safety and Minimise Disruptions

The Road Situation tool integrates externally published road status information with the Consat Telematics environment, providing notifications and warnings in a map and list view. With this tool, you can quickly and easily monitor road conditions and make informed decisions about block assignments and traffic monitoring.
