

Travelito:

for real-time
vehicle tracking

Consat Telematics Travelito is a game-changing solution for real-time vehicle tracking, providing complete fleet visibility without the need for specialised hardware. Whether it's a temporary bus or a backup vehicle, with Travelito running on a phone or tablet, you'll have full visibility across your fleet in the Consat Telematics System (CTS). It's as simple as using a mobile device - yet powerful enough to transform your operations.

Features & benefits

Achieve complete fleet visibility

With Travelito, every vehicle in your fleet becomes part of the Consat Telematics Solution, even if it does not have the vehicle computer installed. Manage your entire fleet from one place, without any additional hardware. For temporary vehicles it's just a matter of installing the app, login and go!

Provide real-time information for passengers

For passengers waiting at bus stops, Travelito ensures they stay informed. Forecasts are calculated and displayed on at-stop screens and online platforms, just like your fully integrated vehicles. Passengers receive accurate, real-time updates across all platforms, ensuring a smooth and stress-free journey, regardless of vehicle type.

Empower drivers with simple, intuitive tools

Travelito is built with the driver in mind. Drivers select their vehicle, assign it to a journey block, and the app does the rest. They'll have their route, timetable, and stop information all in one place, displayed clearly on the screen with a simple map view for navigation. It's intuitive, efficient, and keeps your drivers focused on delivering great service.

Enable seamless communication with traffic controllers

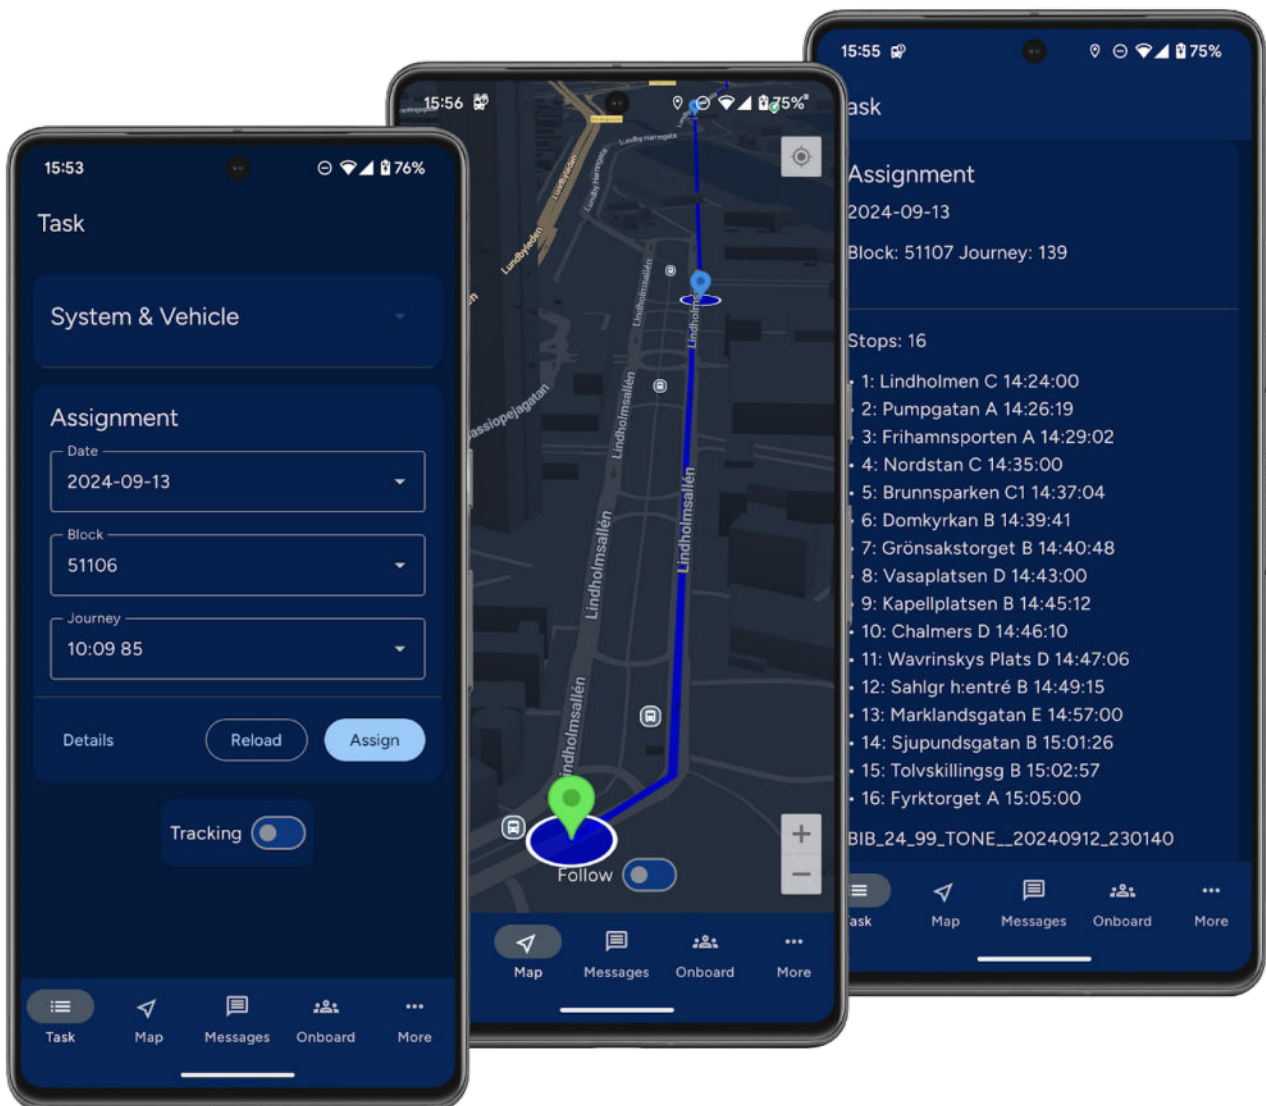

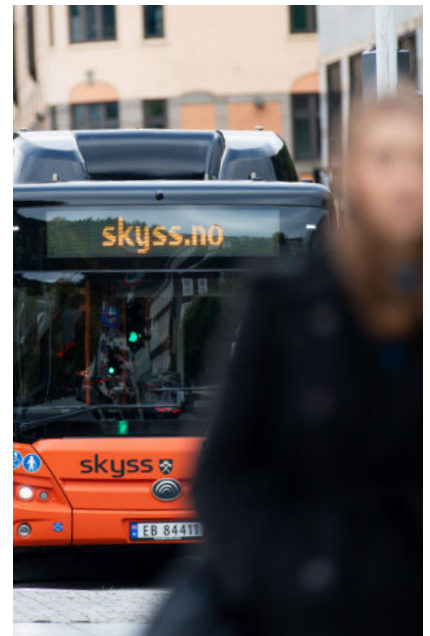

Keeping in touch with traffic controllers has never been easier. Travelito allows drivers to send and receive messages in real-time, using predefined or custom texts, ensuring fast and clear communication. Route deviations? Traffic disturbances? No problem. With Travelito, the entire team stays in sync, even when the unexpected happens.

Capture passenger data effortlessly

Manual passenger reporting is made effortless. Drivers can quickly input the number of passengers boarding and alighting, and this data is sent straight to traffic controllers, appearing as if it came from an automatic passenger counter. You'll have the data you need to keep operations running smoothly and efficiently.

Adapt to modern fleet operations

Travelito runs on Android phones or tablets, offering flexibility and convenience. It can even coexist with other apps, like ticketing systems, on a single device — a cost-effective solution for temporary or multi-purpose vehicles. It's technology that adapts to your needs, not the other way around.

Traffic Management

Plan, dispatch and locate to secure public transportation service quality.

Fleet Management

Monitoring and control for preventive maintenance.

Passenger Information

Real-time information on-board, at stops and online

Driver Assistance

Support for a secure, comfortable, and energy efficient journey

Electromobility

Smart charging for sustainable electric vehicle operations

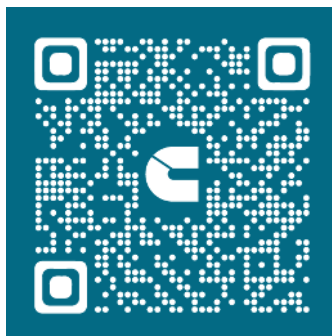

Bringing public transportation to life

Consat Telematics is dedicated to reducing the environmental impact of public transportation through cutting-edge innovation and widespread implementation. Aspiring to global leadership in executing electrification and digitalization within public transportation, we serve diverse markets and organizations.

Our promise is a user centric, modular, and adaptable intelligent public transportation solution that never compromises on quality, reliability, and security. By placing our customers at the core, we ensure that more organisations can receive better data to monitor, manage, and improve their operations.
